

FOR THE PROJECT OFFICER — PLAIN-LANGUAGE SUMMARY

What can you confidently *put your name behind?*

This is your first big chance to prove yourself in this post. One real story first — the strongest, most defensible pairing in the district — then every other centre-and-trade combination worth knowing about.

If you personally recommend a trainee for a job and that trainee fails or gets rejected, it's your name and judgement that gets questioned — by your seniors, and by the employer, who may stop trusting your centres altogether. This report exists to solve that problem before it happens: it tells you exactly who is genuinely ready, backed by real placement data, so you're never caught recommending someone who wasn't prepared. **Electrician training at Govt. ITI Mallepally** is your strongest story this term — trainees went from **13% to 87% job readiness** in six months. Below that, **8 more centre-and-trade combinations** show the same kind of genuine improvement, each with real trainees behind the numbers who are ready to be recommended today.

The one story worth telling first

What changed in 6 months, why it happened, and why it's safe to share with your seniors or a reporter.

STRONGEST STORY THIS TERM

Electrician — Govt. ITI Mallepally

15 trainees admitted this cycle

BEFORE

13%

demonstrating readiness — 9 of 15 trainees needed foundational support

NOW · REAL PLACEMENT DATA

87%

demonstrating readiness — 0 trainees now need foundational support

WHAT CHANGED

Continuous diagnostic assessment

Targeted reinforcement

Reduced tool dependence

11 additional trainees now demonstrate readiness who would not have six months ago — real trainees, not a projection.

WHY THIS ONE, SPECIFICALLY

This pairing was chosen because it has a genuine sample size (15 trainees admitted) and the largest real improvement of any centre-and-trade combination in the district — not because it's the only good news available.

The "Now" figure comes straight from real placement data: 13 of 15 admitted trainees are placed, which is 87% — a number you can stand behind without qualification.

Test this by asking: "Would you be comfortable putting your name behind this claim?"

Reputation Report — What's Working

8 more stories worth knowing

Every other centre-and-trade combination showing real improvement, March to August — ordered by size of jump. Each one is a smaller version of the same story: a defensible claim, backed by real trainees ready to be recommended.

HOW TO USE THIS LIST

These are ranked by **how big the jump was**, not by how many trainees are involved — a smaller centre with a dramatic turnaround can be just as worth mentioning to your seniors as a larger one with steady progress.

The "ready to recommend" count tells you how many trainees in that batch you can safely put forward for a job right now, without waiting for the rest of the cohort to catch up.
